Do good, feel good!

# MINIMIZE YOUR BUSINESS'S CARBON IMPACT WITH RENEWABLE ENERGY CERTIFICATES (RECS & I-RECS)

## DIVERSE PORTFOLIO OF SUSTAINABLE ENERGY PROJECTS

You can now address your Scope 2 emissions regardless of where they happen in the world through our extensive portfolio of sustainable energy sources.

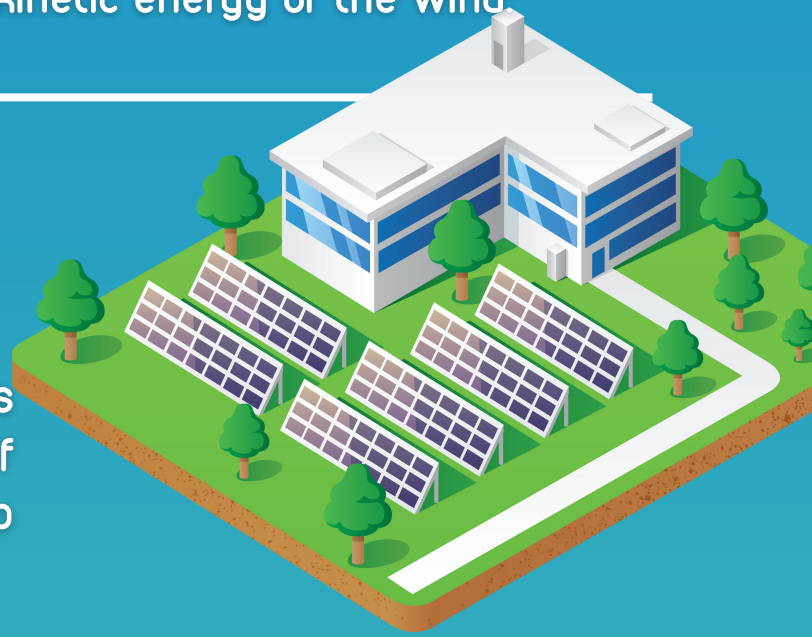

## WIND POWER

Wind energy is a popular and clean type of renewable energy that uses wind turbines to generate electricity from the kinetic energy of the wind.

## SOLAR POWER

The most popular way to harness solar energy is through the use of solar panels that convert sunlight into electricity using photovoltaic cells.

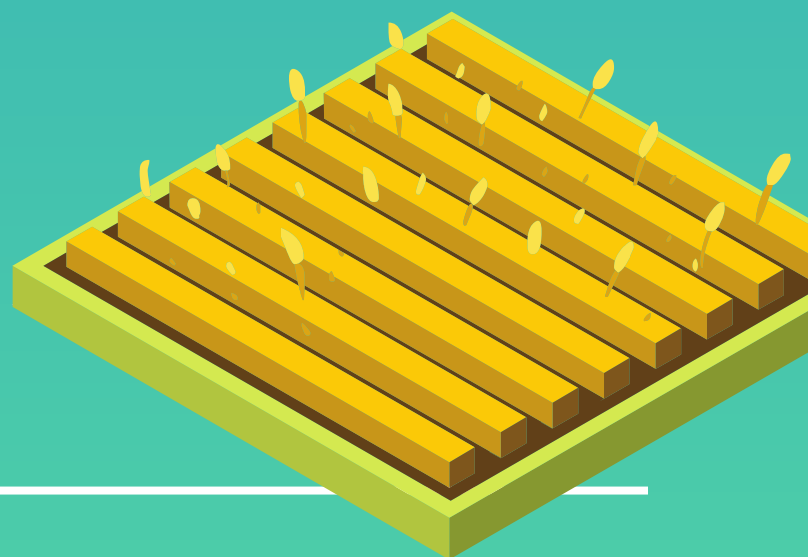

## HYDRO POWER

Hydro energy is a reliable and renewable energy source generated from moving water that can be used for electricity, irrigation, and powering homes and businesses.

## BIOMASS ENERGY

Biomass energy is a renewable energy source from organic matter like plants, wood, and waste that can be used for electricity, heating, and fueling vehicles.

CLIMATE CARBON IS WORKING TOGETHER TO MEET  
COMPANIES' RENEWABLE ENERGY OBJECTIVES
